/ol	untary Results Feedback Form
>	I am an examiner in Workgroup: Example: 1610
>	Relevant prior art found, search results used as follows:
	☐ 102 rejection
	☐ 103 rejection
	Cited as being of interest.
	Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	☐ Foreign Patent(s)
	☐ Non-Patent Literature
	(journal articles, conference proceedings, new product announcements etc.)
A	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Results were not useful in determining patentability or understanding the invention.

Pending Nucleic Acid and Pending Amino Acid database searches generate two sets of results each. The Pending databases have been solit into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches. Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions .rnpm and .rnpn

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions rapm and rapn

Because they contain data that is confidential, the results of Pending database searches should not be left in the case.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to compositions and methods for introducing a DNA of interest into a genomic target site. The methods and compositions involve the use of a combination of target sites for two site specific recombinases and expression of a chimeric recombinase with dual target site specificity. The compositions comprise novel site-specific recombinases with specificities to multiple target sites, and nucleotide sequences and expression cassettes encoding these recombinases or target sites. The method of integrating foreign DNA into genome of eukaryotic cell involves transforming the cell having target sites for the novel recombinase with a DNA of interest that is flanked by corresponding target sites. The method is useful for

This sequence can be modified so as to have a high expression efficiency mammal by selecting a codon of high frequency for use in the mammal expressing Cre recombinase. The gene can be used in organ transplantation, gene therapy and creation of animal disease models.

The invention relates to compositions and methods for introducing
a DNA of interest into a genomic target site. The methods and
compositions involve the use of a combination of target sites for two
site specific recombinases and expression of a chimeric recombinase
with dual target site specificity. The compositions comprise novel
site-specific recombinases with specificities to multiple target sites,
and mucleotide sequences and expression cassettes encoding these
and mucleotide sequences and expression cassettes encoding these
into genome of eukaryotic cell involves transforming the cell having
target sites for the novel recombinase with a DNA of interest that is
flanked by corresponding target sites. The method is useful for
constructing stably transformed eukaryotic cells, preferrably plant
cells. The present sequence is a chimeric recombinase DNA encoding
moCRE, Cre protein from Bacteriophage Pl with maize preferred codons.

The invention relates to a polypeptide comprising a site-specific DNA recombinase (DRI) and a membrane translocation sequence (WTS), and nucleic acids that encode such cell-permeable recombinases. The sequences of take that encode such cell-permeable recombinases. The sequences of the invention are useful for stimulating site-specific DNA recombination in a cell and for determining the efficiency of protein transduction into a population of cells. The polypeptide of the invention is further useful for detecting whether site-specific DNA recombination has occurred within a cell and for identifying a compound that modulates unclear metabolism in a cell. It is used for identifying a peptide that behaves as a membrane translocation or nuclear localisation signal (NLS) and is also useful for identifying a compound preferably an amino acid sequence that modulates the compound preferably an acid sequence that modulates the compound activity of a polypeptide to a cell or the activity of a polypeptide to a cell or the activity of a polypeptide to a cell or the activity of a polypeptide to a cell or the activity of a polypeptide to a cell or the activity of a specific therapeutic protein, by enhancing or other activity across the blood-brain barrier. The present sequence is His6-NLS-Cre-MTS fusion DNA comprising cre gene from Bacteriophage Plana and Simian virus 40 NLS sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Site-specific DNA recombinase, DR1; membrane translocation sequence; MTS; cell-permeable recombinase; nuclear localisation signal; NLS; excretion, trafficking; blood-brain barrier; His6-NLS-Cre-MTS fusion gene; chimeric; simian virus 40; SV40; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polypeptide comprising a cell-permeable site-specific DNA recombinase and membrane translocation sequence for stimulating site-specific DNA recombination in a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 639.4; DB 24; Length 1158;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to use of fusion proteins comprising a site-specific DNA recombinase domain e.g. Cre and a protein transduction domain (PTD) e.g. the Human immunodeficiency virus (HIV) derived TAT peptide, for preparing an agent for inducing target gene alterations in a living organism or cell culture. The present invention also provides a method for inducing gene alterations in living organisms using the fusion proteins of the invention. The present sequence is a pGK-cre-pA DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 4847;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                   The present invention relates to use of fusion proteins comprising a site-specific DNA recombinase domain e.g. Cre and a protein transduction domain (PTD) e.g. the Human immunodeficiency virus (HIV) derived TAT peptide, for preparing an agent for inducing target gene alterations in a living organism or cell culture. The present invention also provides a method for inducing gene alterations in living organisms using the fusion proteins of the invention. The present sequence is a pCMV-I-Cre-pA vector DNA.

The invention comprises the amino acid and coding sequences of fusion proteins that contain a recombinase domain and a signal peptide domain which directs nuclear import of the fusion protein in evkaryotic cells. The fusion proteins of the invention are useful for recombining the DNA molecules of cells or organisms containing recombinase recombining the DNA sequences for the recombinase domain of the fusion proteins. The fusion proteins of the invention are useful for studying gene function at various developmental stages and for the creation of transgenic organisms. The C31-Int recombination system of the invention can be used for the site-specific integration of foreign DNA into the genome of mammalian cells (e.g. for gene therapy). The present DNA sequence represents a vector that was used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AGCCTGGGGGTAACTAAACTGGTCGAGCGATGGATTTCCGTCTCTGGTGTAGCTGATGAT

The present invention relates to a conditional gene trapping construct capable of causing conditional mutations in genes. The gene trapping construct comprises two functional DNA segments, each being flanked by two recombinase recognition sequences (RRSs) specific to site specific recombinase which is capable of undirectional inversion of double standard DNA segment. One of the DNA segment (disruption cassette) is inserted in antisense orientation relative to the transcriptional orientation of the gene to be trapped. The other DNA segment (selection orientation of the gene to be trapped. The other DNA segment (selection cassette) is inserted in sense direction relative to the transcriptional corientation of the gene to be trapped. The coll comprising the gene corientation of the gene trapped or the identification and/or isolation of genes. The transgenic organism comprising the gene trapping construct is useful for mutationally inactivating all cellular correction at various developmental stages. The gene trapping construct is useful for mutationally inactivating all cellular genes. The present sequence is retroviral vector pBABA-pgkCre which is used as gene trap in embryonic stem (ES) cells. The vector genes to constructed by inserting Bacteriophage Pl cre recombinase coding region with a similar virus 40 large T-antigen N-terminal nuclear complexity mutine leukemia virus based vector pBABEBuro.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2151

The invention comprises the amino acid and coding sequences of fusion proteins that contain a recombinase domain and a signal peptide domain which directs nuclear import of the fusion protein in eukaryoric cells. The fusion proteins of the invention are useful for recombining the DNA molecules of cells or organisms containing recombinase recomplining the DNA sequences for the recombinase domain of the fusion proteins. The fusion proteins of the invention are useful for studying gene function at various developmental stages and for the creation of transgenic organisms. The C31-Int recombination system of the invention can be used for the site-specific integration of foreign DNA into the genome of mammalian cells (e.g. for gene therapy). The present DNA sequence
                                                                                                                                                                                                                                                                                Novel fusion protein useful for recombining DNA molecules in eukaryotic cells has recombinase protein which is linked to signal peptide domain which directs nuclear import of fusion protein in eukaryotic cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               represents a vector that was used in the invention.

The present invention describes a nucleic acid construct, comprising a germline-specific promoter operably linked to a recombinase coding sequence. The construct can be useful for modulating agronomic characteristics, including (a) biotic stress tolerance, increased resistance to herbicides, pest damage, and viral, bacterial, and fungal diseases, improvement of crop nutritional quality, reduction of post-harvest losses, improved quantity and composition of endogenous properties, and production of new plant-derived compounds. The production of alleles containing single recombinase target sites and a desired mutation are useful for producing subtle and conditional mutations that require generation of alleles with minimal structural alterations. They are also useful for generating null alleles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   containing genetically lettal alleles. The recombinase constructs are expressed at high levels in the germ line, but not to a functionally significant degree in Es cells or embryonic or adult somatic tissue. This enables modulation of recombined target nucleic acid sequences in the early embryo. In addition, tissue-specific and conditional recombinatory tools permit the generation of transgenic plants and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         animals. The present sequence represents a plasmid containing mouse protamine 1 promoter and Cre coding sequences from an example of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                423
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CTGAACATGCTGCACGCCGCAGCGGCCTGCCCCGGCCCCAGCGACAGCAACGCCGTGAGC 363
                                                                                                                                                        Producing recombinant adeno-associated virus (rAAV) vector, by stably infecting eukaryotic host cell with rAAV vectors, helper adenovirus or herpes virus, recombinant adenovirus or herpes vectors -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of recombinant adenovirus delta-B1

Cre-loxP Ad, in which the B1 gene of the wild-type adenovirus is
cubstituted by plasmid DNA comprising a cytomegalovirus (CWV)
promoter inserted immediately downstream of the CWV promoter
followed by a sequence from SV40 that specifies polyadenylation mRNA, and a loxP site. The recombinant adenovirus is used as an induction system in methods of the invention. Thus, methods
and compositions are provided for producing recombinant adeno
associated virus (rAAV) vector particles by: (a) introducing into
a secondinant viral vector encoding plasmid, and (iii) a plasmid
a recombinant viral vector encoding plasmid, and (iii) a plasmid
c necoding herpesvirus, cytomegalovirus or adenoviral functions, or
a herpesvirus, cytomegalovirus or adenoviral functions, or
a herpesvirus, cytomegalovirus or adenoviral functions or
flox AAV particles and rAAV particles; and (b) introducing into a
second host cell (i) the rAAV particles or (a), (ii) a vector
that directe expression of Cre, and (ii) a vector which the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (ii) a vector with the composition of Cre, and (iii) a vector with the composition of Cre, and (iii) a vector with the composition of Cre, and (iii) a vector with the composition of Cre, and (iii) a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CCGGTCGATGCAACGAGGTGATGAGGTTCGCAAGAACCTGATGGACATGTTCAGGGATCGC

The present invention relates to the identification of recombinase wariants which have an altered specificity. They are tested using constructs containing variant recognition sites, which are not recognised by non-mutant recombinase but undergo recombination in the presence of a variant enzyme. Variant recombinases are useful in the production of genetically modified crop plants, particularly seedless varieties, and in phage packaging, which has uses in cloning.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | GGCGCCAAGGACGACGGCCAGCGCTACTGGCCTGGAGCGCCCACAGCGCCCCGCGTG 900
